

Lansafe LTD Introduces LED Lighting to Portfolio, Offering Unmatched Benefits to Customers

LED Lighting with Lansafe:

The journey to reducing energy consumption and reducing your overhead costs starts here. LED lighting can save up to 80% in comparison to traditional lighting such as halogen lamps and fluorescent tubes. Therefore, it can be seen that LED lighting is the future with lamps lasting up to 5000 hours longer than heat produced lighting.

Date: 15th May 2023

In a bold move towards sustainability and innovation, Lansafe has expanded its portfolio by introducing LED Lighting Solutions. This strategic decision aims to provide customers with a wide range of benefits, including energy efficiency, cost savings, and enhanced lighting quality, while reducing their carbon footprint.

Lansafe, known for its commitment to cutting edge technologies, has recognised the growing demand for sustainable lighting solutions in various sectors. By adding LED lighting to their offerings, they aim to cater to the evolving needs of the businesses and individuals who prioritise environmentally friendly and energy-efficient solutions.

LED lighting has gained popularity worldwide due to its numerous advantages over traditional lighting systems.

Unlike conventional incandescent or fluorescent bulbs, LED lights consume significantly less energy while producing brighter and more focused illumination. This leads to substantial energy savings, translating into reduced electricity bills and long-term cost efficiency for customers.

Moreover, LED lights have an exceptionally long lifespan compared to other lighting options. With an average operational life of around 50,000 hours, LED bulbs last significantly longer than traditional alternatives, resulting in reduced maintenance and replacement costs for customers. This not only saves money but also minimises the inconvenience associated with frequent bulb replacements.

Customer Review:

What a fantastic job the team did! Very well recommended! Clean and tidy on the job and a great job installing industrial lighting and an alarm system. Already booked in for more lights in a couple of months. Thanks again.

- Reduce energy bills
- Reduce Carbon Footprint
- Increase productivity

In terms of environmental impact, LED lighting is a game changer. These energy efficient lights consume up to 80% less energy than traditional lighting sources, which directly translates into lower carbon emissions and reduced strain on power grids. By opting for LED lighting solutions, customers can actively contribute to mitigating climate change and promoting sustainability.

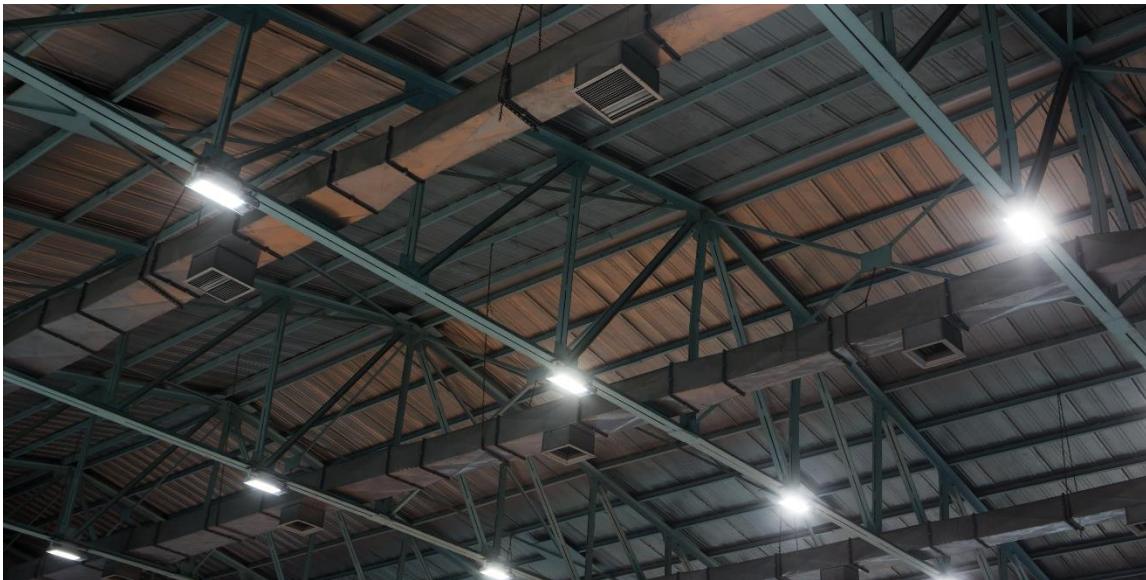

Furthermore, LED lights offer superior lighting quality with their ability to produce a wide range of colours and hues. This feature makes them ideal for creating ambiance and enhancing the visual appeal of various spaces, such as offices, retail stores, hospitality venues, and residential areas.

Lansafe LED lighting solutions encompass a diverse range of products, including bulbs, fixtures, panels, and smart lighting systems, catering to the unique requirements of different customers.

To ensure the seamless adoption of LED lighting, Lansafe provides comprehensive support to customers. This includes expert advice and consultation on lighting design, tailored to suit specific needs and preferences. Their team of professionals possesses in-depth knowledge of LED technology, enabling them to guide customers towards the most suitable lighting solutions for their spaces.

With the expansion of Lansafe's portfolio, Lansafe has positioned itself as a leader in sustainable lighting solutions within the UK market. By offering high quality LED lighting products, we empower customers to make environmentally conscious choices while reaping economic benefits of energy efficiency.

The introduction of LED lighting to our company's portfolio has already generated excitement among businesses and individuals across various industries. From commercial establishments looking to save energy costs or businesses looking to move forward with energy saving.

The benefits of LED lighting solutions are evident and widely sought after.

In conclusion, Lansafe's decision to incorporate LED lighting solutions into their portfolio is a significant step towards meeting the growing demand for sustainable lighting options.

By offering unmatched benefits such as energy efficiency, cost savings, and superior lighting quality, they position themselves as a reliable partner for customers seeking cutting edge and environmentally friendly lighting solutions. With the potential for significant long term savings and reduced environmental impact,

LED lighting is set to transform the lighting landscape in the UK and beyond.
